

# Challenge 7

## Lego Architecture: Pediments

The Georgians often used pediments to decorate buildings, based on the historic designs of ancient Roman and Greek classical architecture. Triangular pediments are usually found above doors or windows and are used for decoration. When you walk around where you live, or google pediments online how many triangular pediments can you spot? Are they always triangular or can you spot different shapes and designs?

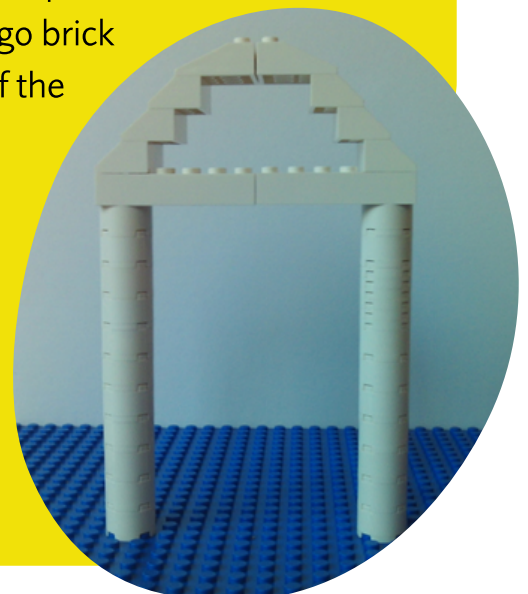

### The challenge

Can you use the Lego bricks to build your own triangular pediment? Consideration will have to be given to what type of Lego brick you need to use, the size of brick and the symmetry of the overall design.

### Want another challenge?

Pediments are typically supported by 2 columns when used on a building, above a door. Can you build a set of columns to rest your pediment on top?
